FT800	800mm	2080mm	1950mm	200kg	75mm	Various

RotoTank™ Pipe Floats have been optimally designed for Industrial pipes over open water, in the Mining Industry as well as Water Treatment Facilities, Aquaculture and Agriculture.

A great deal of research and development went into our unique and durable design, to not only meet but surpass International standards.

RotoTank™ Pipe floats are widely used to support HDPE pipes and flexi hoses on lakes, dams, in harbours or the ocean, to keep pipelines buoyant.

The durable design enables our pipe floats to withstand reasonable impact from moving vessels, floating debris and other foreign objects.

RotoTank™ Pipe floats are available in various sizes, easy to transport. Each float is supplied in two halves and can be easily strapped together on site.

Bright colors are recommended for visibility and to act as a warning to oncoming boats or vessels in the area.

RotoTank™ Pipe floats are non harmful to the environment, suitable to the harsh South African sun.

RotoTank™ is a Manufacturer of water tanks, chemical tanks, transport tanks, septic tanks and silos. We are a National Brand with branches located around the Country. We sell directly to the public and delivery is free.

- 30 Year experience in quality workmanship
- Strong reliable durable and safe
- Designed to last
- Trained technicians for back up service and advice
